

Mule Deer Fawns Visit Tinneys - August 26, 2018

The **Mule Deer Doe** with upper-notched right ear, first visited with one fawn earlier on August 6, returns to the yard for a drink of water followed by **two fawns** which remain to the west of the house near State Trust Land.

Fawn 1 (above) seems to be a bit more aggressive and adventuresome, follow by a shyer **Fawn 2** (below). Passing the same tree, photos are taken of each, and please note the differences in their unique spot patterns. Apparently frightened by something, they scamper back to the forest, followed by their mother.
