If you are in need of a geology fix, you can hear a talk by one of our favorite speakers, Wayne Ranney, next Wednesday July 14 at 5:00 pm. He will be giving a Zoom presentation for Keep Sedona Beautiful on "The Mogollon Rim: Arizona's Other World-Class Landscape." He comments:

"Everyone has heard of the Grand Canyon, but only people from Arizona are familiar with our state's second grandest landform, the Mogollon Rim. Nearly as long as the Grand Canyon and similar in some respects, the Rim has an interesting origin story that is not readily apparent to the casual eye. We will talk about how this amazing feature came into existence."

Keep Sedona Beautiful (keepsedonabeautiful.org) has the link to the presentation and the passcode is 072021: https://us02web.zoom.us/j/84666930330

For those of you who are interested in fossils, Mike Conway at the AZ Geologic Survey passed on this link to a new book published by the Utah Geological Association on the fossils of the Grand Canyon (what are they doing stealing our canyon?):

Grand Canyon National Park Centennial Paleontological Resources Inventory — A Century of Fossil Discovery and Research

As far as the Central Arizona Geology Club goes, no one has volunteered to take over running the programs. If you are interested, I encourage you to consider it. It really is not very time consuming since the club is simplicity itself with no board members, no officers, no money, and no meetings other than the monthly presentation. Meetings have been held from September through May (minus December). Harry and I would be glad to assist and we have a number of suggestions for speakers.
