Great News! The Central Arizona Geology club is restarting under the sponsorship of G.E.M. Environmental, a not-for-profit organization based in Prescott. The first meeting will be held at the Prescott Library on Tuesday, October 12, at 6 pm. There may be limitations on the audience size due to continuing Covid concerns. The library will also have a Zoom option, and here is registration information:

Kassie Henrickson, volunteer coordinator, has given me this information about the speaker, Dan Foley, to pass on:

Danny Foley is a geographer interested in utilizing Geographic Information Systems, geospatial technology, and remote sensing to solve problems in Earth and environmental science. His overall research goals are to help better understand the modeling and mapping of global croplands and their water use to mitigate food and water insecurity. He completed graduate school at Northern Arizona University in applied Geospatial Sciences and is an NAU affiliate researcher.

How geographic science can help to grow more food with less water
How can the science of geography help feed the planet in the 21st century? As the global population grows exponentially, demand for food and water are increasing whereas supply of arable land and accessible freshwater are decreasing. Learn how geographic science and remote sensing can help to mitigate this looming problem and better understand food and water security.

Come, or watch, and enjoy the meeting!

Debbie Allen
